

Demography report 2026

18 June 2026

Please select any country or region, then obtain official demographic data, longitudinally if possible. Then conduct demographic analysis and describe its characteristics, followed by discussion with citing appropriate literatures.

The easiest way to obtain data in R software is to use **wpp2022** or **wpp2024** package* for the world, **fmsb** package for Japan. Anyway, you have to describe how to obtain the data with its source information.

More than 1 page **pdf** file should be submitted to BEEF+.

Deadline is 5 August 2026 (Wed).

For wpp, see <https://population.un.org/wpp/>
You can download Excel files.

But in R, by executing below, it's easy to install.

```
install.packages("wpp2022", dep=TRUE)
or
library(devtools)
options(timeout = 600)
install_github("Ppgp/wpp2024")
```
