Definition of Ethics and Morals

- Morals / Morality: the set of core beliefs or commitments of a person or society that identifies what is most important, valuable, or right with regard to conduct and character (eg.) Murder is usually immoral. Stealing is immoral. · Ethics: more formal version of morality A reasoned or systematic approach to figure out what is the right or wrong Professional morality as expressed in widely accepted codes and statements (opp. personal morality) (eg.) Donation to save the poor children is usually right judged by humanitarianism. The scholarly study of morality by philosophers (eg.) Why war commander is praised although the one kill many enemies Objectively thinking in ethics
 - Being reasonable and not doctrinaire
 - Listening actively to others
 - Letting the best reasons determine judgments
 - Staying close to the practical issues at hand on which consensus is possible
 - Remaining calm and optimistic in the face of controversy

 History of Ethics in Environmental Health Related Debates Environments are provided for human welfare by the God? (classic) Environmental damage to the Earth resulted from human sins? (medieval) Human dominates over nature? (early modern) Multidisciplinary cooperation with many health professionals, new codes are needed (modern) Professional Codes of Ethics Dedication to service to the client Respect for other professionals Assurance of high levels of competence Protection of confidentiality Performance with honesty and integrity Avoidance of conflicts of interest Informed consent and cooperation with clients Service to the community Promotion of the profession itself Some of the Ethical Theories Deontology (義務論) / Utilitarianism (功利主義) / Bioethics / Feminist ethics / Religious ethics 	International consensus statements • Earth Charter (2000): The resilience of the community of life and the well-being of humanity depend upon preserving a healthy biosphere with all its ecological systems, a rich variety of plants and animals, fertile soils, pure waters, and clean air. The global environment with its finite resources is a common concern of all peoples. The protection of Earth's vitality, diversity, and beauty is a sacred trust. http://www.earthcharter.or.jp/downloadfiles/japanese.pdf (in Japanese) (ref) http://www.earthcharter.or.jp/resource/
	 Rio Declaration on Environment and Development (1992): Human-beings are at the centre of concerns for sustainable development. We are entitled to a healthy and productive life in harmony with nature. see, http://habitat.igc.org/agenda21/rio-dec.html

General principles of ethics

- Sustainability: Conduct environmental health work in such a way that it meets the needs of both the present and future generations -> three immediate implications
- Methods of cost accounting that discount the future should be avoided The full life-cycle cost of environmental health measures must be included (i.e. LCA is an important method)
- Many have observed a strong correspondence between the wealth of a nation and the average health of its citizens (World Bank 1993) Healthfulness: The health of humans and the environment needs to be restored,
- balanced and harmonized
- Interconnectedness: Environmental health actions have far-reaching consequences
- (such as "butterfly effect") eg. Greenhouse gases released in the Northern Hemisphere spread everywhere, including the Southern Hemisphere, resulting in those least responsible for climate change suffer most from its effects ... (it's also the issue of environmental justice)
- Respect for all life: Environmental health work should be conducted with respect for both human and nonhuman life (cf. Is "biophilia" our nature?)
- Global equity: Everyone is entitled to just and equal access to the basic resources needed for an adequate and healthy life.
- Respectful participation: Respect the considered and responsible choices of stakeholders, whether individuals or organizations
- Realism: Environmental health ethics should be founded on a realistic understanding of the health sciences and the risks and benefits of proposed activities and investments
- The idea of ecological footprint is needed to understand the resource gap among countries Precautionary principle is going to be widely accepted as a mode of realistic risk assessment 5

Controversies/Conflicts in ethics

Examples

- Air pollution, water pollution, vegetarianism, cultural conflict, fossil fuels and climate change, genetically modified organisms, nuclear power, pesticides, slaughter of animals, obesity vs undernutrition vs starvation, environmental exposures and the human genome, confidentiality vs informed consent vs right to know, war, research ethics
- Common features
 - New technologies with uncertain risks
 - Social relationships with predictable conflicts
 - Risks and benefits that need to be rationally balanced
 - Competing goods
 - Cultural differences
 - Different views of our place in and relationship to nature
- Complexity

2

Examples of community-based Background of environmental justice environmental justice issues · It's convergence of the two of the major movements in latter 20th century · Chicago (African American, poor, urban, industrial): Public housing project, with population 10,000, built on top of landfill in 1940s and now Civil rights movement surrounded by polluting industries, landfills, incinerators, smelters, steel Environmental movement mills, chemical companies, paint manufacturing facility, a.k.a. Chicago's Three core concepts "toxic donut." The meaning of disproportionate impacts (Act against environmental (cf.) Fresh market movement from Tsukiji to Toyosu: Similar problem? https://www.youtube.com/watch?v=t8HCh56Vla0 (Financial Times) https://www.youtube.com/watch?v=hdK83GA1Xw8 (Al Jazeera) racism) The legal, public policy, and research challenges · NY West Harlem (African American, urban) : Northern Manhattan is the The community-based, collaborative problem-solving strategies and tools site of North River Sewage Treatment Plant, hosts 5 to 6 bus depots. Monumental root in Warren County, NC High rates of asthma and respiratory illness. West Harlem NC decided that it was going to put PCB into a community that was 65% environmental action and Columbia University School of Public Health African Americans, but black and white residents were united and said conducted community-based participatory research No. Barrio Boca (Puerto Rican, rural): Pesticide drift caused by aerial https://www.youtube.com/watch?v=1iCxh0BYjgI spraying on mango and banana plantation owned and operated by https://www.youtube.com/watch?v=S6XnQcdIS9Q Tropical Fruit Company. Community actions resulted in court order to restrict spraying to only optimal weather conditions. Nov 15, 2017 Nov 15, 2017 8 7
